

Apogee Essential Edition — HTML Revision Summary

Original file: apogee-essential-edition.html

Revised file: apogee-essential-edition-v2.html

Date: 2 June 2026

Revised by: OpenCode

Overview

A review of apogee-essential-edition.html was carried out covering HTML structure, SEO metadata, Schema.org structured data, accessibility, CSS, and content accuracy. The file was found to be well-formed overall. One cross-browser rendering bug was identified and corrected in the revised version.

Change Made

Fix: WebKit disclosure triangle on FAQ <summary> elements

Location	CSS block — summary rule
Type	Bug fix
Browsers affected	Google Chrome, Microsoft Edge, Safari

Problem

The FAQ accordion uses <details> / <summary> elements with a custom + / – toggle indicator. The original CSS used list-style: none on <summary> to suppress the default disclosure arrow. This works in Firefox but does **not** remove the native WebKit disclosure triangle in Chrome, Edge, and Safari — causing both the native arrow and the custom + symbol to appear side by side.

Fix applied

Added the vendor-prefixed pseudo-element rule to explicitly hide the WebKit marker:

```
/* Original (v1) */
summary {
  list-style: none;
  /* ... */
}
summary::after { content: '+'; font-size: 1.2rem; color: #0057a8; }

/* Revised (v2) */
summary {
  list-style: none;
  /* ... */
}
summary::-webkit-details-marker { display: none; }
summary::after { content: '+'; font-size: 1.2rem; color: #0057a8; }
```

Result: The custom + / – indicator now renders correctly as the sole toggle marker in all major browsers.

Items Reviewed — No Changes Required

Area	Verdict
HTML5 document structure	Pass
<meta charset>, <meta viewport>	Pass
SEO title, description, keywords	Pass
Canonical URL	Pass
Open Graph tags (og:type, og:title, og:description, og:image)	Pass
